

Q2 2022 Summary

The Fund was negative in Q2 2022 as losses for the Long Equity strategy outweighed gains for the Managed Futures strategy. Some key drivers of quarterly performance included:

- ▶ Losses for the Long Equity strategy as downtrends in US stocks continued, with the S&P 500 finishing the quarter in bear market territory
- ▶ Positive performance for the Managed Futures strategy due to short bond and long USD exposures

Performance as at 30 June 2022

	Track Record start date	QTD	YTD	1 YR	5 YR	10 YR	ITD
Class I (MAFIX)*	14 May 2002	-1.02%	4.88%	6.99%	13.77%	12.89%	11.03%

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Performance would have been lower without fee waivers in effect. Visit www.abbeycapital.com for returns updated daily. Call (US Toll Free) 1-844-261-6484 or (international callers) +1-508-871-3276 for returns current to the most recent month-end. Non predecessor Fund returns would have been lower without fee waivers in effect. *Performance shown prior to 11 April 2018 is for the Fund's Predecessor Fund (Abbey Global LP). The fund commenced operations as a series of The RBB Fund, Inc. on 11 April 2018, when all of the assets of Abbey Global LP ("Predecessor Fund") transferred to Class I Shares of the Fund. The Fund's objectives, policies, guidelines and restrictions are in all material respects equivalent to the Predecessor Fund. Please see page four for further details on the Predecessor Fund. The performance from April 2014 to 11 April 2018 represents proprietary performance, as the only investors for that period were Abbey Capital Limited and its officers. **The inception date of the Class C Shares was 5 November 2021. Returns for Class C Shares prior to 5 November 2021 are pro forma (i.e. returns of Class I Shares from 11 April 2018 adjusted for Class C Shares expenses). Performance results with sales charges ("with load") reflect the deduction of the applicable contingent deferred sales charge (CDSC). Class C shares are subject to a CDSC of 1.00% if you redeem your shares within twelve (12) months of purchase, based on the lesser of the shares' cost at purchase or current net asset value at time of redemption. Performance presented without sales charges does not include the CDSC and would be lower if a charge was reflected. Annual Fund Operating Expenses after fee waiver are as of the most recent prospectus and are applicable to investors. The Fund's net expenses are 1.79% for Class I Shares and 2.79% for Class C Shares, net of the Fee Waiver (described below). The gross expenses are 2.28% for Class I Shares and 3.28% for Class C Shares. Abbey Capital has contractually agreed through December 31, 2022 to waive its advisory fee and/or reimburse expenses to limit Total Annual Fund Operating Expenses (excluding Excluded Items below) to 1.79% for Class I Shares (the "Fee Waiver"). The following are not included in the Fee Waiver: acquired fund fees and expenses, brokerage commissions, extraordinary items, interest or taxes ("Excluded Items").

Morningstar Overall Rating for MAFIX based on risk adjusted returns among 47 US Multistrategy funds. Derived from a weighted average of the Fund's 3-year risk-adjusted return measures. The overall rating applies to the I Share Class of the Fund as of 30 June 2022. Ratings may differ per share class.

Performance Analysis

- ▶ High inflation and tighter central bank policy remained drivers of market sentiment. The prospect of higher rates impacted the global growth outlook, with fears of a recession growing as the quarter progressed and economic data weakened.
- ▶ This backdrop proved challenging for traditional assets, with US bonds and equities both recording their worst start to a calendar year since the early 1970s.
- ▶ The Long Equity strategy drove losses due to positions in S&P 500 futures. Worries about the impact of tighter monetary policy, mixed earnings and economic data, and fears the global economy was approaching a recession all weighed on US stocks during the period. The S&P 500 fell -16.4%, its largest quarterly decline since Q1 2020, and finished the quarter in a -21% drawdown.
- ▶ The Managed Futures strategy was positive in Q2 2022. Trend rotation was a notable feature of the quarter, with stronger trends emerging in financial markets as global central banks turned more hawkish. Meanwhile, uptrends in commodities lost some momentum.
- ▶ Short bond positions drove the largest gains for the Managed Futures strategy, with global yields rising alongside tighter monetary policy and higher inflation. Central banks in the US, UK, Switzerland, Australia and Canada hiked rates, while the European Central Bank signalled its plans to hike in July.
- ▶ The US Dollar index hit a 20-year high on global slowdown fears and higher US yields. The Managed Futures strategy profited from long USD positions against the EUR and JPY.

Positioning

- ▶ The Managed Futures strategy remained short fixed income throughout the quarter. In commodities, longs in energy were maintained while positioning in metals and agricultural commodities shifted from long to short.
- ▶ The Managed Futures strategy finished the quarter short in equities, while the Long Equity strategy maintained its equity position below its 50% target throughout the period.
- ▶ In currencies, positioning remained long in the USD, with the JPY and the EUR the most prominent currency shorts.

► Predecessor Fund

Performance shown before 11 April 2018 is for the Fund's Predecessor Fund (Abbey Global, LP). The prior performance is net of management fees and other expenses. Performance of the predecessor fund is not an indicator of future results. Abbey Global LP was launched on 14 May 2002. From May 2002 until April 2014 Abbey Global LP invested approximately 100% of its assets in a passively managed portfolio participating in the U.S. and international equity market and approximately 50% of its assets in a private placement fund managed by Abbey Capital Limited. From April 2014 to April 2018, Abbey Global LP invested approximately 50% of its assets in a passively managed portfolio participating in the U.S. equity market and approximately 50% of its assets in a private placement fund managed by Abbey Capital Limited. The performance from April 2014 to 11 April 2018 represents proprietary performance as the only investors in Abbey Global LP for that period were Abbey Capital Limited and its officers. For further details on the Predecessor Fund please see the Prospectus.

RISK CONSIDERATIONS:

► All mutual fund investing involves risk including the possible loss of principal value. Investing in a managed futures fund entails special risks and may not be suitable for all investors given its speculative nature and the high level of risk involved. The Fund is appropriate only for investors who can understand and bear the risks associated with the product. **You may lose part or all of your investment in the Fund.**

► Except for fund returns, the portfolio statistics shown in this fact sheet are based only on the open forward, future and option contracts held by the wholly-owned and controlled subsidiaries of the Fund and does not take into account any other assets held by the Fund (primarily cash and cash-equivalents). The Fund may invest approximately 25% of its total assets in the ACMAF Master Offshore Limited, which invests substantially all its assets in ACMAF Offshore SPC. Individual managers are appointed to separate segregated portfolios of ACMAF Offshore SPC and are permitted to trade certain financial, managed futures and foreign exchange contracts.

► Futures and forward contracts may involve substantial risk, such as losses caused by unanticipated market movements, which are potentially unlimited; possible lack of a liquid secondary market; the inability to close a contract when desired; and the possibility of counterparty default.

► Short sales theoretically involve unlimited loss potential since the market price of securities or contracts sold short may continuously increase. The use of certain derivatives may also have a leveraging effect which may increase the volatility of the Fund and may increase the risk of loss.

► Exposure to commodities markets and commodity-linked derivatives may subject the Fund to greater volatility affected by industry-related factors, value, supply and demand, governmental policies, weather, economic and political factors.

► Investments in foreign and emerging markets are subject to risks from currency fluctuation, political instability, social and economic risks. In particular, emerging and frontier markets may be more volatile and less liquid than more developed markets and therefore may involve greater risks.

► The Fixed Income strategy invests the Fund's assets primarily in investment grade fixed income securities (of all durations and maturities) in order to generate interest income and capital appreciation. Fixed income securities that the fund may invest are subject to credit risk, prepayment risk and interest rate risk so that as interest rates rise the value of bond prices will decline. These risks are usually greater for longer -term debt securities.

► The Fund is non-diversified which means it may be invested in a limited number of issuers and susceptible to any economic, political and regulatory events than a more diversified fund.

► **This brief statement cannot disclose all of the risks and other factors necessary to evaluate a participation in the Fund.** Investors are urged to take appropriate investment advice and to carefully consider their investment objectives, personal situation, and factors such as net worth, income, age, risk tolerance and liquidity needs before investing in the Fund. Before investing, investors should carefully consider the Fund's investment objectives, risks, conflicts, tax considerations, charges and expenses.

► **Abbey Capital Limited** ("Abbey Capital") is a private company limited by shares incorporated in Ireland (registration number 327102). Abbey Capital is authorised and regulated by the Central Bank of Ireland as an Alternative Investment Fund Manager under Regulation 9 of the European Union (Alternative Investment Fund Managers) Regulations 2013 ("AIFMD"). Abbey Capital is registered as a Commodity Pool Operator and Commodity Trading Advisor with the U.S. Commodity Futures Trading Commission ("CFTC") and is a member of the U.S. National Futures Association. Abbey Capital is also registered as an Investment Advisor with the U.S. Securities Exchange Commission ("SEC"). Abbey Capital (US) LLC is a wholly owned subsidiary of Abbey Capital. None of the regulators listed herein endorse, indemnify or guarantee the member's business practices, selling methods, the class or type of securities offered, or any specific security.

► The CFTC, the SEC, the Central Bank of Ireland or any other regulator have not passed upon the merits of participating in any trading programs or funds promoted by Abbey Capital, nor have they reviewed or passed on the adequacy or accuracy of this report.

NOK	Norwegian Krone	GBP	British Pound
BRL	Brazilian Real	NZD	New Zealand Dollar
ILS	Israeli Shekel	MXN	Mexican Dollar

► VaR Definition:

Value-at-Risk (VaR) expresses market risk as a percentage of a portfolio's value. The VaR figures quoted are as of 30 June 2022, based on a historic VaR calculation with a 5-year lookback period (1300 days). The historical approach to evaluating a portfolio's VaR involves applying the current positions to the historical portfolio prices of the corresponding instruments, and then calculating how the current positioning would have performed historically. For any chosen threshold value, the hypothetical returns then provide an estimate of the current VaR figure.

► %VaR:

%VaR is the contract VaR as a percentage of the sum of the individual contract VaRs within the Fund.

► Description of investment strategies:

Managed Futures: Bi-directional managed futures exposure at a targeted level of approximately 100% of the Fund's net assets achieved through allocations to five underlying managers.

Long U.S. Equity ("Managed Long Equity" or "Long Equity"): A long exposure to S&P 500 executed through a rolling long position in S&P 500 futures.

► Explanation of indices:

S&P 500 Total Return Index: This index is the total return version of the S&P 500 Index. Dividends are reinvested on a daily basis and all regular cash dividends are assumed reinvested in the index on the ex-date.

SG Trend Index: This index is designed to track the 10 largest trend following Commodity Trading Advisors by assets under management and be representative of the trend followers in the managed futures space. The index is equally weighted and rebalanced annually. It is not possible to invest directly in an index.

► **Morningstar**

The Morningstar Rating™ for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

Abbey Capital Multi Asset Fund (Share Class I) received a 5-star Rating applying for the 3 year period ending June 30, 2022 in the Multistrategy Category out of 47 funds; based on risk adjusted returns. Past performance is no guarantee of future results. Morningstar Rating is for Class I Shares only; other classes may have different performance characteristics.
