Abbey Capital Futures Strategy Fund

Class A | ABYAX

Annual Shareholder Report | August 31, 2026

Abbey Capital

This annual shareholder report contains important information about the Abbey Capital Futures Strategy Fund (the "Fund") for the period of September 1, 2025, to August 31, 2026 (the "Period"). You can find additional information about the Fund at https://www.abbeycapital.com/abbey-capital-futures-strategy-fund. You can also request this information by contacting us at 1-844-261-6484.

WHAT WERE THE FUND COSTS FOR THE PERIOD? (based on a hypothetical $10,000 investment)

Class Name	Costs of a $10,000 investment	Costs paid as a percentage of a $10,000 investment
Class A	$218	2.04%

HOW DID THE FUND PERFORM DURING THE PERIOD AND WHAT AFFECTED ITS PERFORMANCE?

The Fund saw positive performance over the Period. The Fund's diversified trendfollowing sub-advisers were the primary source of positive performance at the trading style level.

At the market sector level, the Fund saw gains in metals, equities, energy and currencies. Gains in metals stemmed from longs in silver and gold, both of which saw strong price rallies through the end of January. In contrast, gains in equities occurred more steadily through the Period as momentum in technology and artificial intelligence-related stocks continued. Asian stock markets were a notable outperformer over the Period. Having detracted in the first six months of the Period, the energy sector saw strong gains from long positions from March onwards as escalating conflict in the Middle East and concerns for supplies through the Strait of Hormuz saw energy prices rise sharply. The currency sector saw smaller gains reported, with longs in the Mexican Peso and Australian Dollar and shorts in the Japanese Yen the strongest contributors.

The Fund saw losses in fixed income and agricultural commodities. Global bond yields generally rose over the window, but did so in a choppy manner which made it difficult for the Fund's diversified trendfollowing sub-advisers to navigate at times. Trading in soybean, corn, cattle and coffee contracts also proved difficult for performance within agricultural commodities.

HOW DID THE FUND PERFORM OVER THE PAST 10 YEARS?*

The $10,000 chart reflects a hypothetical $10,000 investment in the class of shares noted and assumes the maximum sales charge. The chart uses total return net asset value performance and assumes reinvestment of dividends and capital gains. Fund expenses, including 12b-1 fees, management fees and other expenses, were deducted.

CUMULATIVE PERFORMANCE (Initial Investment of $10,000)

ANNUAL AVERAGE TOTAL RETURN (%)

	1 Year	5 Year	10 Year
Class A (without sales charge)	13.86	4.11	3.18
Class A (with sales charge)	7.3	2.89	2.57
S&P 500 Total Return Index	20.38	12.79	15.37

* The data shown relates to the positions held by the Fund and its wholly owned and controlled subsidiaries and does not take into account any other assets held by the Fund (primarily cash and cash-equivalents). The Fund is actively managed and percentages may vary over time. Value at Risk Definition: Value-at-Risk (VaR) expresses market risk as a percentage of a portfolio's value. The VaR figures quoted are as of August 31, 2026 and based on a historic VaR calculation with a 5-year lookback period (1300 days), calculated at the 95th percentile. The historical approach to evaluating a portfolio's VaR involves applying the current positions to the historical portfolio prices of the corresponding instruments, and then calculating how the current positioning would have performed historically. For any chosen threshold value, the hypothetical returns then provide an estimate of the current VaR figure.
